

## Hygie-Tech SA Makes Practical CFD Software Solutions Available Globally

- Hygie-Tech has secured Swiss Authority Export Approval, making HG\_Flow software available to clients across the world
- HG\_Flow uses 3D laser scans of premises to rapidly produce visualisations of air flow
- Software plays an essential role in response planning for potential chemical, radiological and biological attacks

Geneva, 28<sup>th</sup> September 2010

**Hygie-Tech** [www.hygie-tech.ch](http://www.hygie-tech.ch), a leading Computational Fluid Dynamics (“CFD”) software company today announces that it has secured a permit from the Swiss Authorities to export its products to 29 countries. This means that Hygie-Tech can begin selling its pioneering software to the defence industry around the world.

HG\_Flow software is already used for a range of industrial purposes throughout Switzerland, from surgical operating rooms to vehicle design and manufacturing. With the ability to provide accurate detail down to the scale of one millimetre, this product is widely used for the examination of air flow in Heating, Ventilation and Air Conditioning (“HVAC”) controlled environments.

Hygie-Tech will now take its innovative CFD program, **HG\_Flow.Protect** into countries throughout Europe and the rest of the world, marketing its capability to formulate contingency and response plans for buildings that could be potential targets for chemical and biological terrorist attacks.

**Raymond Andrieu**, CEO of Hygie-Tech commented:

*“We are very pleased to have been granted this export licence and we are excited about being able to sell our solutions to the wide customer base that it opens up. We now plan to progressively offer our software to the European and the US markets.*”

*“In disaster contingency planning, HG\_Flow.Protect is an essential tool, particularly with regards the threat of chemical and biological attacks. This tool is invaluable to those planning response and protection for persons and products in potentially contaminated areas.*”

*“Unlike many CFD softwares which rely on super computers, Hygie-Tech programmes can operate on a multi core Apple Mac. This capability, coupled with the product’s rapid calculation time means that Hygie-Tech offers a highly specialist solution that can be utilised directly by engineers. You don’t need to be a mathematician to use it”.*
